

Department of Public Utilities

Wakefield Road Drainage Improvement Project

Project Information

This project will address the severe erosion within the existing channel in the neighborhood backyards and the consistent sediment buildup within the existing channel between Wakefield Road and Rattlesnake Creek (see figure below). The proposed improvements consist of approximately 1,000 linear feet of new storm drain pipe within the eroded swale between Stratford Road and Wakefield Road, replacement of the undersized culverts under Stratford Road and Wakefield Road, and improvements to the existing channel between Wakefield Road and Rattlesnake Creek.

All necessary easements have been acquired and private utility relocation is complete. The project design and environmental permit acquisition is complete.

Project Schedule

Project Assignment: February 2020 (RK&K)

Survey & Preliminary Design: Completed

Engineering Design: Completed (RK&K)

Construction Assignment: Construction anticipated to begin mid-August 2022 for an estimated 6 months

What Happens Next:

Construction equipment will be in the neighborhood daily and periodic road closures can be expected as part of the drainage improvement project. We apologize for the inconvenience and greatly appreciate your patience as these improvements are made.

Project Benefits:

Will repair the severe erosion and sediment build-up in neighborhood backyards.
